**Course Description:**

This course introduces the lands and peoples of East and Southeast Asia. It focuses on the distributions and interrelationships of physical environments and human behaviours. Regions are ongoing outcomes of sustained human activity that integrate past cultural experience into current ideas, technological developments, and resource practices. These latter three combine in future changes to further promulgate the culture and to shape the regional identity within the world community.

The course provides a framework through which to explore the changing human geography of a diverse and dynamic region. After an overview of the physical and political geography of the region, the lectures will focus on selected topics that are especially germane to understanding East and Southeast Asia as a sub-global region, we will call 'Pacific Asia'. The emphasis is on the patterns displayed by socio-cultural variation in resources utilization. Both general characteristics of the region and particularities within and between different countries will be presented while working through the issues. The tutorials will be organized for practical work, such as analysis of maps, open discussion of video clips, and assigned readings.

**Course Prerequisites:** None.

**Course Objectives:**

- To present the emerging region of Pacific Asia in a way that will lead to understanding the role of regional differences in the era of globalisation;
- To provide the student with an opportunity to learn about the region from the spatial perspective and to interpret the region through use of some geographic principles and techniques;
- To describe and discuss selected issues, to help the student increase awareness of and sensitivity to the differences of the physical and human environments in Pacific Asia;
- To outline Pacific Asian geographical patterns of regional spatial organization, its ecological characteristics, cultural roots, and contemporary social-economic-political forces;
- To understand how the people in the region perceive and use their physical settings to develop their distinctive places and identities in the global community.
