**Course Description:**

This course adopts a geographic approach to understanding contemporary China. It examines how transformations of China's land, people, economy, and society are recasting internal regional divisions and repositioning China in a rapidly changing world.

*No prerequisites* are needed for this course. Lectures will present essential information for a virtual tour of the regions and peoples of the "many Chinas" in the reform era. We trace dramatic changes over space and time as this vast ancient civilization emerges on the world stage as contemporary China. Tutorials further explore diverse values, practices, and landscapes. Students learn to understand the forces that have shaped a new cultural geography in China. We see continuing development in the face of daunting challenges but also exciting possibilities for the future of its own citizens, regional roles, and global presence.

The course uses the theories and methodologies of geography to help students understand these dynamic changes in context. Employing various scales of analysis to identify regional features, students will explore the conditions, events, problems, and trends of contemporary China and their implications for people inside and outside of China.

The course is for students considering China-related careers in government, NGOs, or business, as well as preparing them for further studies on China in Geography or in other areas of study.

**Learning Objectives:**

After successful completion of this course, students will have

- 1) knowledge of the geography of China: population, environmental, cultural, political, and economic characteristics;
- 2) use of geographical concepts and techniques: reading and working with map data and satellite images of China;
- 3) understanding of the regions of China: natural (physical) settings, socio-economic regions, and recasting regions.
